

Samuel Tanaka Sibarani

Applying for: Network Security Intern

📞 (+62) 812 8202 8269 | ✉ sammtan.rt@gmail.com | 🌐 sammtan | 📄 sammtan.github.io | 📍 Jakarta, ID (Remote Available)

Professional Summary

Entry level network security specialist with extensive hands-on experience in enterprise network architecture, VLAN segmentation, and network threat detection. CCNA-certified with practical expertise in designing secure network topologies and implementing advanced security controls. Seeking a network security internship to apply enterprise networking knowledge and contribute to organizational network defense strategies.

Education

Universitas Indonesia

Jakarta, ID

B.Eng. in Computer Engineering

09/2022 - 09/2026

Network Focus: Computer Networks, Network Security, Protocol Analysis, Network Programming

Network Security Projects

NetLab V2 - Enterprise Network Architecture

Network Security Architect | 2025

- Designed enterprise-grade network topology with 17 VMs across segmented security zones
- Implemented advanced VLAN configuration with DMZ, Corporate, and Security network segments
- Built comprehensive bridge networking architecture with software-defined networking (SDN)
- Created network monitoring dashboard with real-time traffic analysis and anomaly detection

Network Technologies: Bridge Networking, VLAN Segmentation, Network Isolation, Traffic Analysis

NetGuard ML - Network Threat Detection

Network Security Analyst | 2024

- Developed intelligent network monitoring system with machine learning-based threat detection
- Implemented advanced network behavior analysis for detecting lateral movement and data exfiltration
- Created network topology visualization with real-time threat intelligence integration
- Built comprehensive network security reporting with attack vector analysis

Security Features: Intrusion Detection, Network Behavior Analysis, Threat Intelligence, Incident Response

Professional Network Certifications

Cisco Networking Certifications

2024-2025

1 CCNA: Enterprise Networking, Security, and Automation

Cisco Networking Academy | Advanced enterprise networking, network security protocols, network automation

2 CCNA: Introduction to Networks

Cisco Networking Academy | Network fundamentals, TCP/IP, routing and switching, network troubleshooting

3 Ethical Hacker - Cisco

Cisco Networking Academy | Network penetration testing, vulnerability assessment, network security analysis

Specialized Security Workshops

- Wireless Hacking Lab** - Wi-Fi security analysis and wireless network penetration
- Network Forensics** - Packet analysis and network incident investigation
- Network Automation** - Infrastructure as code and automated security controls

Technical Network Skills

Network Protocols & Technologies

- Routing Protocols:** OSPF, EIGRP, BGP, RIP
- Switching:** VLAN, STP, VTP, Port Security
- Security Protocols:** IPSec, SSL/TLS, 802.1X, NAC
- Wireless:** 802.11 standards, WPA/WPA2/WPA3, wireless intrusion detection

Network Security Tools

- Monitoring:** Wireshark, tcpdump, ntopng, Cacti
- Scanning:** Nmap, Masscan, Zmap, Unicornscan
- Analysis:** Security Onion, Suricata, Snort, Zeek

- **Penetration:** Metasploit, Aircrack-ng, Kismet, Reaver

Infrastructure & Platforms

- **Virtualization:** QEMU/KVM, VMware, VirtualBox
- **Containers:** Docker networking, container security
- **Operating Systems:** Linux network configuration, Windows Server networking
- **Cloud:** AWS/Azure networking, VPC configuration, cloud security groups

Network Security Expertise

Network Architecture & Design

- Enterprise network topology design with security-first approach
- Network segmentation and micro-segmentation strategies
- Zero-trust network architecture implementation
- Network redundancy and high availability planning

Security Implementation

- Firewall configuration and rule optimization (iptables, pfSense, Cisco ASA)
- Intrusion Detection/Prevention System (IDS/IPS) deployment
- Network Access Control (NAC) and endpoint security integration
- VPN implementation and secure remote access solutions

Threat Detection & Analysis

- Advanced persistent threat (APT) detection in network traffic
- Network behavior analysis and anomaly detection
- Security information and event management (SIEM) integration
- Incident response and network forensics

Compliance & Standards

- Network security policy development and implementation
- Compliance frameworks understanding (ISO 27001, NIST)
- Security audit and vulnerability assessment procedures
- Risk assessment and mitigation strategies

Practical Network Experience

Wireless Security Research

2024-2025

- **Wi-Fi Penetration Testing** - WPA/WPA2 cracking, rogue access point detection
- **Wireless Network Analysis** - RF spectrum analysis, wireless protocol security
- **IoT Network Security** - IoT device security assessment and network isolation

Network Incident Response

- **Packet Analysis** - Deep packet inspection for security incidents
- **Network Forensics** - Evidence collection and analysis from network traffic
- **Breach Investigation** - Network compromise analysis and containment

CVE Research & Network Exploitation

Network-Based Vulnerability Research

2024-2025

- **Billy Madison VulnHub** - Advanced port knocking and network steganography exploitation
- **Network Service Exploitation** - Service enumeration and network-based attack vectors
- **Lateral Movement Analysis** - Network pivoting and post-exploitation techniques

Detailed network security research: sammtan.github.io/writeups

Programming for Network Security

Network Programming

- **Primary Languages:** 🐍 Python (Network automation, packet analysis)
- **Scripting:** Bash, 📜 PowerShell for network administration
- **Low-Level:** 🇨 C/C++ for network protocol development

Network Libraries & Frameworks

- **Packet Manipulation:** Scapy, dpkt, PyShark
- **Network Monitoring:** PRTG SDK, SNMP libraries

- **Automation:** Ansible for network configuration, Terraform for infrastructure

Languages

Indonesian (Native), **English** (Professional Working Proficiency)
