

Samuel Tanaka Sibarani

Applying for: Penetration Testing Intern

📞 (+62) 812 8202 8269 | ✉ sammtan.rt@gmail.com | 🌐 sammtan | 📄 sammtan.github.io | 📍 Jakarta, ID (Remote Available)

Professional Summary

Ethical hacking enthusiast with extensive hands-on penetration testing experience through CVE exploitation, CTF competitions, and security research. Certified Ethical Hacker with practical expertise in vulnerability assessment, reverse engineering, and network penetration. Seeking a penetration testing internship to apply offensive security skills in real-world enterprise environments.

Education

Universitas Indonesia

Jakarta, ID

B.Eng. in Computer Engineering

09/2022 - 09/2026

Security Focus: Ethical Hacking, Network Security, Cryptography, Digital Forensics

Penetration Testing Experience

CVE Research & Vulnerability Analysis

2024-2025

Billy Madison 1.1 VulnHub

- Advanced port knocking exploitation and network steganography
- Packet analysis and traffic monitoring for hidden communication channels
- Multi-stage exploitation chain from network discovery to system compromise

Tiki 1 VulnHub

- Web application penetration testing and CMS exploitation
- SQL injection and authentication bypass techniques
- Privilege escalation and post-exploitation enumeration

DarkHole 2

- Network service enumeration and vulnerability assessment
- Binary exploitation and buffer overflow analysis
- Linux privilege escalation and system hardening bypass

Security Projects

NetLab V2 - Penetration Testing Lab

Security Architect | 2025

- Built comprehensive penetration testing laboratory with 10-VM attack simulation environment
- Created realistic enterprise network with intentional vulnerabilities for red team exercises
- Developed automated testing scenarios for common attack vectors and exploitation techniques

Attack Vectors: Web App Testing, Network Pivoting, Privilege Escalation, Post-Exploitation

NetGuard ML - Threat Simulation

Red Team Developer | 2024

- Developed advanced attack simulation platform with machine learning detection evasion
- Implemented corporate breach scenarios, APT attack patterns, and IoT botnet simulations
- Created adversarial ML techniques to test detection system resilience

Techniques: Network Reconnaissance, Lateral Movement, C2 Communication, Data Exfiltration

Professional Certifications

Ethical Hacking Certifications

2024-2025

1 Ethical Hacker - Cisco

Cisco Networking Academy | Advanced penetration testing methodologies, vulnerability assessment frameworks

2 Penetration Testing Workshop Series

Hacktrace Ranges x Spentera, CEP-CCIT FTUI

- Penetration Testing Basic: Practical Skills for Security Enthusiasts
- Ghidra Reverse Engineering: Binary analysis and malware research
- Wireless Hacking Lab: Wi-Fi security and wireless network exploitation

3 CCNA: Enterprise Networking, Security, and Automation

Cisco Networking Academy | Network infrastructure analysis for penetration testing

Technical Arsenal

Penetration Testing Tools

- **Network Scanning:** Nmap, Masscan, Zmap
- **Web Application:** Burp Suite, ZAP, SQLmap, Nikto
- **Exploitation:** Metasploit, Cobalt Strike, Empire
- **Post-Exploitation:** Mimikatz, BloodHound, PowerShell Empire

Reverse Engineering & Malware Analysis

- **Disassemblers:** Ghidra, IDA Pro, Radare2
- **Debuggers:** GDB, WinDbg, x64dbg
- **Analysis:** Wireshark, Volatility, YARA

Programming for Security

- **Scripting:** 🐍 Python, Bash, 📄 PowerShell
- **Exploitation:** 🇨 C/C++, Assembly, 🇷 Ruby

Operating Systems

- **Attack Platforms:** Kali Linux, ParrotOS, BlackArch
- **Target Systems:** Windows Server, Linux (Ubuntu/CentOS/RHEL), macOS

Penetration Testing Methodology

Reconnaissance & Intelligence Gathering

- OSINT collection and target profiling
- Network enumeration and service identification
- Social engineering and information gathering

Vulnerability Assessment

- Automated and manual vulnerability scanning
- Custom exploit development and proof-of-concept creation
- Risk assessment and business impact analysis

Exploitation & Post-Exploitation

- Multi-stage exploitation chains and lateral movement
- Privilege escalation and persistence techniques
- Data exfiltration and evidence collection

Reporting & Remediation

- Executive and technical report generation
- Risk prioritization and remediation roadmaps
- Security awareness training and recommendations

CTF Achievements

- **HackTheBox** active member with consistent machine solving
- **TryHackMe** security challenges and learning paths completion

Languages

Indonesian (Native), **English** (Professional Working Proficiency)
